(I) IMPORTANT BATTERY INFORMATION

NOTE: EVEN THOUGH THE “LEAD ACID” BATTERY IS CHARGED AT THE FACTORY, IT IS RECOMMENDED TO CHARGE THE BATTERY FOR 24 HOURS PRIOR TO STARTING THE TABLE.

DO NOT LET YOUR BATTERY DISCHARGE COMPLETELY! DRAINING YOUR BATTERY COMPLETELY WILL DEGRADE OR DESTROY THE BATTERY.

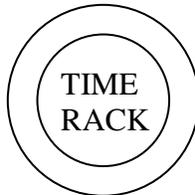

We recommend recharging every 30 days.

DANGER: BOARD DAMAGE MAY OCCUR IF YOU TRANSPORT TABLE WITH THE BATTERY INSTALLED. DISCONNECT AND STORE BATTERY IN CASH BOX (Push Chute).

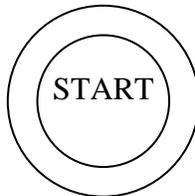

SPEED POOL INSTRUCTIONS

To START and STOP the SPEED POOL Timer

Press the TIME / RACK Button next to the Dollar Bill Acceptor

Or the START Button next to the Q-Ball Return

(II)

VALLEY BATTERY BILL ACCEPTOR POOL TABLE SETUP PROCEDURE (READ ENTIRE MANUAL FIRST BEFORE PERFORMING THE FOLLOWING)

Initial Startup

IMPORTANT

NOTE: EVEN THOUGH THE “LEAD ACID” BATTERY IS CHARGED AT THE FACTORY, IT IS RECOMMENDED TO CHARGE THE BATTERY FOR 24 HOURS PRIOR TO STARTING THE TABLE.

Open the Bill Acceptor Access Door (FIGURE 1).

**Bill Acceptor
Access Door**

FIGURE 1

Access Button

FIGURE 2

Connect the two battery leads to the battery, making sure to connect the yellow wire to positive (+) & the black wire to negative (-). Place the charged battery in the hold-down provided.

NOTE: The Day & Time will have to be set. Follow the “Setup of Operating Values”.

(III)

Setup of Operating Values

Look for the small pushbutton marked “Access” (FIGURE 2) mounted on the left circuit board. Press and hold the Access Button in until the upper line of the display will sequentially show the numbers 5-4-3-2-1 and then the word SETUP will appear on the lower line. Release the access button & the first parameter to set will be displayed. The upper display line shows the function being set. The lower display line shows the present value of the function. For example the first parameter is:

SET CLOCK
DAY SUN (Example)

For ease of use, the external buttons next to the Bill Acceptor Access Door are now used to complete the setup. The START button is used to step the value through its valid range. Once the desired value is displayed, the TIME/RACK selector button is used to store the new (or unchanged) value & step to the next parameter. When the last parameter has been set, a further push of the TIME/RACK button will return the table to operation. When set-up is complete close and lock the Bill Acceptor Access Door.

NOTE: To avoid numerous button pushing when only a few changes need to be made, press the Access Button (FIGURE 2) one time (after the changes are made) then push the TIME/RACK button one time. Then the parameters are saved & the table is returned to normal operation.

(IV)

Default Values:

4.	GAME COST NORM	\$1.00
5.	GAME COST HAP1	\$0.75
6.	GAME COST HAP2	\$0.75
7.	TIME COST 30 MIN	\$5.00
8.	CREDIT LEVEL 1	\$5.00
9.	L1 BONUS GAMES	5
10.	CREDIT LEVEL 2	\$10.00
11.	L2 BONUS GAMES	10
12.	TIME BONUS	5
13.	HAPPY HOUR 1 SUN START HR	16
14.	HAPPY HOUR 1 SUN START MIN	0
15.	HAPPY HOUR 1 SUN END HR	16
16.	HAPPY HOUR 1 SUN END MIN	0
17.	HAPPY HOUR 2 SUN START HR	16
18.	HAPPY HOUR 2 SUN START MIN	0
19.	HAPPY HOUR 2 SUN END HR	16
20.	HAPPY HOUR 2 SUN END MIN	0

Rest of the Happy Hour values (Monday through Saturday) are the same as Sunday.

(V)

Setup Parameter Notes (Parameters Chart is on the Page 5)

Parameters **1** through **3** are real-time clock set.
(All time parameters are in a 24-hour clock format)

Parameters **4** through **6** are cost of 1 rack in normal time & in happy hours 1 & 2.
(Note: Setting a cost to zero selects free play during that time. The prompt will be replaced with the message "FREE PLAY PUSH START")

Parameter **7** is the cost of 30 minutes of time play.
(Note: If cost is set to zero, no time play is allowed. The cost per 30 minutes prompt will be replaced by the message "PLEASE USE BILLS".)

Parameter **8** is credit level 1 (The amount of money required to get any bonus racks.)
(Note: Setting parameter 8 to zero disables any bonus racks at credit level 1.)

Parameter **9** is the number of total games given if credit level 1 is reached.
(Example: \$5.00 equals 7 games total, this is not linked to Normal Pricing.)

Parameter **10** is credit level 2 (The amount of money required to get bonus racks.)
(Note. Any bonus racks given at credit level 2 replace any given at level 1. They do not add up. Setting parameter 10 to zero disables any bonus racks at level 2 but any level 1 bonus racks will still be given)

Parameter **11** is the number of total games given if credit level 2 is reached.
(Example: \$10.00 equals 12 games total, this is not linked to Normal Pricing.)

Parameter **12** is the bonus minutes of play given for purchasing 1 hour of play.

Parameters **13** & **14** are the start time of the first Happy Hour interval of Sunday.

Parameters **15** & **16** are the end time of the first Happy Hour interval of Sunday.

Parameters **17** & **18** are the start time of the second Happy Hour interval of Sunday.

Parameters **19** & **20** are the end time of the second Happy Hour interval of Sunday.

(VI)

If a Happy Hour start & end time are set equal to each other, that Happy Hour interval will not take place. **(Note: If start & end times are both set to 0, that Happy Hour will continue for the full 24 hours of that day.)**

The rest of the days of the week Happy Hours setup parameters follow. (21 through 68)

A full list of the parameters and their limits:

Parameter #	Message	Min. value	Max. value	Increment
1.	SET CLOCK DAY	SUN	SAT	(DAY)
2.	SET CLOCK HR	00	23	1
3.	SET CLOCK MIN	00	59	1
4.	GAME COST NORM	\$0.00 (Free Play)	\$10.00	\$0.25
5.	GAME COST HAP1	\$0.00 (Free Play)	\$10.00	\$0.25
6.	GAME COST HAP2	\$0.00 (Free Play)	\$10.00	\$0.25
7.	TIME COST 30 MIN	\$0.00 (off)	\$30.00	\$1.00
8.	CREDIT LEVEL 1 RANGE	\$0.00 (off) \$5.00	\$9.75	\$0.25
9.	L1 BONUS GAMES	2	9	1
10.	CREDIT LEVEL 2 RANGE	\$0.00 (off) \$10.00	\$20.00	\$0.25
11.	L2 BONUS GAMES	10	30	1
12.	TIME BONUS	0 (off)	30	5

Happy Hour can now roll over to the next morning. **EXAMPLE:** Friday Happy Hour starts at 4 PM and you want it to end at closing 2 AM (At most locations).

Setup your Happy Hour as follows:

HAPPY HOUR 2 HAPPY HOUR 2
FRI START HR 16 FRI START MIN 00

HAPPY HOUR 2 HAPPY HOUR 2
FRI END HR 02 FRI END MIN 00

Happy hour start/stop parameters: The first group (13 through 20) is for Sunday. The second group (21 through 28) is for Monday & so on through 68

Parameter #	Message	Min. value	Max. value	Increment
13.	HAPPY HOUR 1 SUN START HR	0	23	1
14.	HAPPY HOUR 1 SUN START MIN	0	45	15
15.	HAPPY HOUR 1 SUN END HR	0	23	1
16.	HAPPY HOUR 1 SUN END MIN	0	45	15
17.	HAPPY HOUR 2 SUN START HR	0	23	1
18.	HAPPY HOUR 2 SUN START MIN	0	45	15
19.	HAPPY HOUR 2 SUN END HR	0	23	1
20.	HAPPY HOUR 2 SUN END MIN	0	45	15
21-68	Rest of Happy Hour setups. (See above).			

Happy Hour can now roll over to the next morning. **EXAMPLE:** Monday Happy Hour starts at 4 PM and you want it to end at closing 2 AM (At most locations).

Setup your Happy Hour as follows:

HAPPY HOUR 2 HAPPY HOUR 2
MON START HR 16 MON START MIN 00

HAPPY HOUR 2 HAPPY HOUR 2
MON END HR 02 MON END MIN 00

(VII)

READING THE STORED "BOOK-KEEPING" TOTALS

To access the stored "**Book-Keeping**" totals, proceed as you did under "**Setup of Operating Values**". As before, press & hold the Access Button until the upper line of the display counts down. When the countdown reaches 3, 2, or 1 release the Access Button. The first stored total will be displayed. **Note:** These totals are read only & can only be reset by **REPLACING** the program chip U1.

The TIME/RACK select button is used to step through the stored totals, as with the NOTE on page 2, and the ACCESS button may be used to return the table to normal operation on the next push of the TIME/RACK button.

The Stored "Book-keeping" Totals are:

1. RUNNING TOTAL This is the total \$ (Dollar) value inserted in the Bill Acceptor and roll down Coin Chute.

WARNING: The "Running Total" may not agree with that of the electronic counter (If counter is present) but it should track it. (If "Running Total" increases by \$15 then so will the counter total.)

2. RACK PLAY This is the total \$ (Dollar) value of all rack play including both Happy Hours.

3. HAPPY HOUR 1 This is the total \$ (Dollar) value of all rack play during Happy Hour 1.

4. HAPPY HOUR 2 This is the total \$ (Dollar) value of all rack play during Happy Hour 2.

5. TIME PLAY This is the total \$ (Dollar) value of all time play.
(Note: If Time Play is disabled, this total will not appear.)

6. BONUS GAMES This is the total number of bonus games given.
(Not linked to Normal Pricing)

7. BONUS TIME MINS This is the total number of Time Play bonus minutes given.
(Note. If Time Play is disabled, this total will not appear.)

(VIII)

Replacing the battery

Open the Bill Acceptor Access Door (FIGURE 3).

Disconnect the two battery leads & remove the discharged battery from the hold-down.

NOTE: You must press the Access button every time you reconnect the battery. If the battery is disconnected LONGER than 5-10 minutes, the Day & Time may need to be set & should be checked. (Follow the “Setup of Operating Values” on page 2) but no other settings will be lost.

Re-connect the two battery leads, making sure to connect the black wire to negative (-) FIRST & the red wire to positive (+). Place the charged battery in the hold-down provided.

**Bill Acceptor
Access Door**

FIGURE 3

To charge battery with “On Board Charger”

The “On Board” Battery charger is installed in the table behind the ball return. To charge the battery (Using the On Board Charger) at the location. Simply plug an extension cord into the 3-prong receptacle. Receptacle is located underneath the table at the Ball Return end near the center of the table. **(NOTE: Table is designed to run off of a Battery NOT just the charger alone !)** Running the table with only the Charger is not recommended and could damage the electronic part of the table.

(IX)

Removing Dollar Bill Acceptor (DBA) and/or Stacker

1. Open the Bill Acceptor Access Door (FIGURE 4).
2. Disconnect the connector to the right of the DBA.
3. Remove the four nuts (FIGURE 5).
4. DBA is now ready to remove.
5. Reverse process to re-install.
6. To remove stacker slide the white square (FIGURE 6) out and stacker lifts up and out. To replace stacker just reverse process and stacker snaps in place.

Bill Acceptor
Access Door

FIGURE 4

The Four Nuts

FIGURE 5

White Square

FIGURE 6

(X)

Great 8 Chip Replacement & Startup

Open the Bill Acceptor Access Door (FIGURE 7) and **Disconnect the Battery.**

Bill Acceptor
Access Door

FIGURE 7

Link LK3 U1 Chip Access
Button

FIGURE 8

Locate link LK3 on the left circuit board, (FIGURE 8) & remove the shorting link from the two pins. Locate U1 on the left circuit board. Remove and replace with new program chip. **(Make sure the notch molded into one end of the chip is closest to the access button & that no pins are bent under.)** Replace the LK3 link onto the two pins (FIGURE 8).

Connect the two battery leads making sure to connect the yellow wire to positive (+) & the black wire to negative (-). The display should now display the default time & rack costs, & the "heartbeat" asterisk (*) should be flashing in the lower right hand corner of the LCD display.

If the display is not as described:

Double-check the battery connections.

Check to insure the Chip U1 is properly installed.

Disconnect the Positive battery lead & wait 10 seconds. Re-connect lead.

To test, insert a bill into the DBA. **NOTE: there will be a slight delay before the DBA wakes up and the bill is accepted.** The display will show "Checking Bill".

NOTE: **ALL DATA HAS BEEN LOST !!!** The Day & Time will have to be set and if the settings were changed from the original defaults, follow the "Setup of Operating Values" (Page 2) procedure to customize the program.

(XI)

Additional notes about the new program and “On Board” Charger

1. When play is in progress, the program may be reset by pressing the access button. Any time or rack credits will be lost but the stored totals will be correct.
2. When the battery needs recharging the display will show the message:

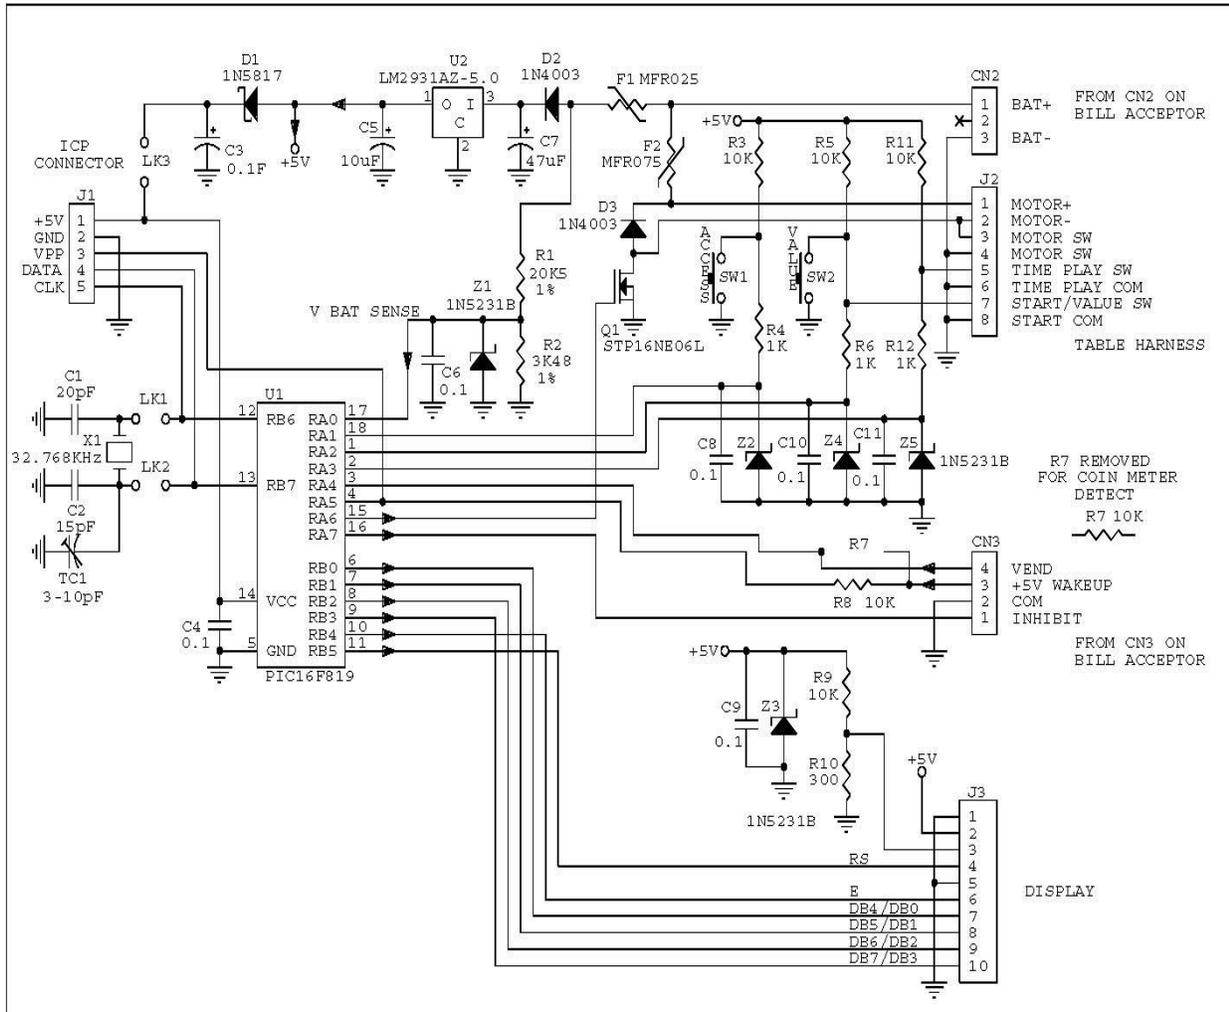

LOW BATTERY
USE PUSH CHUTE

To clear this message you **MUST** press the START button next to the Dollar Bill Acceptor. Once the message has been cleared you may insert a bill into the Dollar Bill Acceptor to double-check the battery condition. If the battery is low, the Low Battery message will re-appear. Then re-charge your battery.

3. Any time bills are accepted by the bill acceptor, the 4 hour credit cancel timer is started. Each time a rack of balls is released this timer is reset to 4 hours. At the end of 4 hours with no activity, the program will be reset. This will cancel any credit (money, time or racks). If money credit was not assigned to Rack play or Time play, this will not be reported on the Rack or Time Stored Totals, but it will be included in the Running Total.
4. Any credit remaining will be shown on the display. (CREDIT \$ N.NN)
5. If the coin meter is left unplugged, the DBA will be disabled.
Normal operation may be restored by re-connecting the coin meter.
6. The “On Board” Battery charger is installed in the table behind the ball return. To charge the battery (Using the On Board Charger) at the location. Simply plug an extension cord into the 3-prong receptacle. Receptacle is located underneath the table at the Ball Return end near the center of the table. **(NOTE: Table is designed to run off of a Battery NOT just the charger alone !)** Running the table with only the Charger is not recommended and could damage the electronic part of the table. The charger that will be inside the table is a 12 Volt 1000mA for sealed Led Acid batteries. To charge a 12 Amp Hour battery that is completely dead should take about 24 hours.

Plastic vs. Metal Motor for DBA Tables

If your ball drop motor fails and it looks like...

...the motor on the left, and you have a Valley Great 8®
order part # 030205025

...the motor on the left and you have a Dynamo Pro Plus®
order part # 030205030

...the motor on the right,
order part # 880200121. It may still be in warranty, so provide your
complete model number and serial number when placing your order.

(XIV)

TROUBLE SHOOTING GUIDE

The ICT DBA runs off of a 12-volt battery. To extend battery life the DBA is in “Sleep Mode” until a bill is inserted. When a bill is inserted into the DBA the two LED’s will flash (There is a slight delay until the DBA is in “Wake Mode”) which tells you that the DBA has been activated. Also, the LC Display will show the words “Checking Bill”. Insert bills into the DBA and receive credit to play the game. If you are not able to insert bills and receive credit, see the following suggestions listed below.

If the ICT DBA will not take dollar bills, check the follow situations.

Display reads: **LOW BATTERY**
USE PUSH CHUTE

1. The battery is below 11 Volts and needs charging.
 - a. Using the “On Board” Charger:
After the battery is charged (Charging at least 24 hours or until the Green Light on the charger comes on) press the “Start” button next to the Dollar Bill Acceptor to clear the display message. If the display does not clear the low battery message, then unplug the wire going to the Positive Terminal of the battery for 5 seconds then plug back on. Since the battery was unplugged, go into “Setup” and check the “Day” and “Time” and adjust appropriately. The rest of the program will not be affected. Test the table by inserting dollars and vend the pool balls to insure proper operation.
 - b. Swapping out the Battery:
Unplug the battery and replace it with a completely charged battery. Plug the black wire to the Negative Terminal **first** then the Red or Yellow wire to the positive terminal second. Check display for blinking “ * ”. If the battery was unplugged for longer than 10 minutes check “Time” and “Day” in “Setup”. All other settings will not be affected.

If the LED’s do not flash on:

1. Battery may be low. Check out the table with a fully charged battery. If the table now works, change the battery.

If the LED’s do flash check the ICT Manual for error or reject codes page 4.

If the LED’s do not flash:

1. DBA may be locked out because there are credits on the display and a game is selected.
2. Coin Meter may be disconnected, if so, connect coin counter and try again.

3. Pool balls will not vend using the “Start” button:
 1. Make sure the game has credits on the display and a game has been selected (Rack or Time Play) using the Time/Rack button.
 2. Check to insure that all connectors are seated properly on both the Valley/Dynamo red and Coin boards. Mainly, J2 on the Valley/Dynamo red board (lower right hand corner). If loose, reseal connector and try again.
 3. Check to see if the Start button switch is properly mounted in the holder.
 4. Check the wires going to the start button to insure the wires are not damaged.
 5. Check to see if the Start button is wired in the normally open position.
 6. Try using the Push Chute to vend balls. If the balls vend via the Push Chute, then check the motor function.

Motor Function:

1. Make sure the game has credits on the display and a game has been selected (Rack or Time Play) using the Time/Rack button. Activate the Start button while the Push Chute Door is open so that you can observe the motor movement. **NOTE: DO NOT TURN MOTOR BY HAND OR PULL ON CABLE. DOING SO MAY DAMAGE MOTOR!**
 - a. If the motor cycles, but does not vend the pool balls:
 1. Check to insure the cable has not come off of the motor shaft arm.
 2. Check to insure the cable has not come off of the trip rod.
 3. Check to insure the “8” hook on the motor shaft arm is not damaged.
 4. Check to insure the Eye Bolt on the trip rod is not damaged.
 5. Check to insure the cable is not damaged or broken.
 - b. If the motor does not cycle when the start button is pushed:
 1. Battery may be low. Check with fully charged battery. If the motor now works, change the battery.

2. Check to insure the wires have not come loose from the motor. (Yellow wire on the top and Black wire on the bottom of motor.)
3. Check to insure the wires have not come loose from the motor switch. (Wired in the normally open position.) SEE Page 12, Motor Assembly.
4. Motor may be broken or bad. Replace with known good motor.

LC Display is blank (Nothing on the display).

1. Battery may be low. Check out the table with a fully charged battery. If the LCD now works, change the battery.
2. If battery connections are loose, disconnect connectors from the battery and tighten connectors with pliers. Reconnect battery.
3. Check the Link LK3 to insure that the link is properly seated.
 - a. If the link is loose, remove the link and spread link posts so that the link will not be loose when the link is put back. Reconnect link. Disconnect battery for 10 seconds and reconnect.
4. Check the harness connector connection J3 (on the Valley/Dynamo red board) to make sure the connector is seated correctly.
 - a. If the connector is loose, reseal connector. Disconnect battery for 10 seconds and reconnect.
5. Check the harness connector connection on the LCD display board to make sure the connector is seated properly.
 - a. If the connector is loose, reseal connector. Disconnect battery for 10 seconds and reconnect.
6. Visually inspect the LCD to make sure the display is not cracked. If the display has some dark purple liquid under the glass you more than likely have a cracked display and will have to replace the display.

(XV)

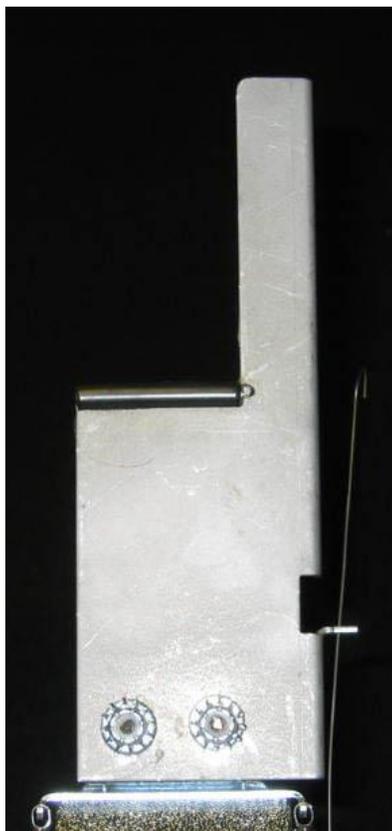

FIGURE 9 – part # 20600046

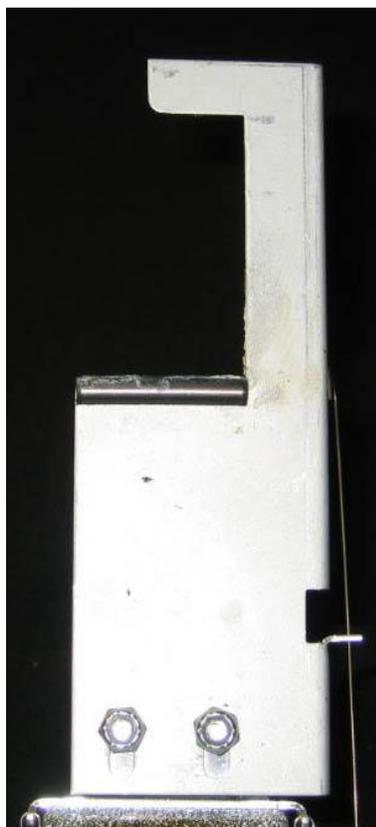

FIGURE 10 – part # 20600044

DANGER:

If Push Chute Door is changed be aware of the different style of Push Chute Extensions!

FIGURE 9 shows the **CORRECT** Push Chute Extension for the Great Eight!

FIGURE 10 Shows the **WRONG** Push Chute Extension for the Great Eight!

FIGURE 9 shows the **ONLY** Push Chute Extension to be used in the Great Eight because of the configuration of the motor to vend the pool balls, and the **ONLY** Push Chute Extension currently available for tables Model ZD-4 to present.

FIGURE 10 shows the Push Chute Extension that Valley had used from the ZD-4 to the ZD-8. It is discontinued and no longer available.

NOTE: Swapping doors with the Push Chute Extension shown in FIGURE 10 will cause MOTOR DAMAGE.

(XVI)

Valley-Dynamo Great8 Software Timing Addendum

If you are using an IC on your main board that is geared toward resolving time keeping issues, please use this document to “fine tune” the system clock. Fine tuning may be necessary depending on certain system environments.

1. Start by performing the usual steps to enter the System Configuration Menu
 - a. Press and hold down the ACCESS button until the system is showing “5 4 3 2 1 Setup” on the display: **DO NOT** let go of the ACCESS button at this point or you will enter the game configuration menu as usual
2. With “5 4 3 2 1 Setup” displayed, press and hold down the VALUE button so that both buttons are being held down
3. You are taken into the clock configuration menu
 - a. If the clock configuration menu does not display, you do not have an IC with the Time Configuration utility. Contact your support department for an updated IC.
 - b. When you enter the clock configuration menu, **DO NOT** let go of the ACCESS and VALUE buttons yet. This screen acts like a stop watch screen. When you let go of the buttons, the timer begins to count and you can use a stop watch or some other timing device to find the setting appropriate for your environment. The default value is 35, and can navigate between 0 (slowest) to 99 (fastest)
4. When you are ready to compare the system time to your own clock/stop watch, release both the ACCESS and VALUE buttons and the system starts counting
5. Use the Time/Rack button to increase the value (speed up the clock)
6. Use the Start button to decrease the value (slow down the clock)
7. When you are comfortable with your choice, press the ACCESS button to exit the clock configuration menu
8. You will now have to set the time using the normal system configuration menus
9. To restart the Time Configuration utility, go back to step 1

(XVII)

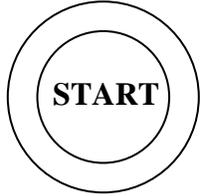

GREAT EIGHT OPERATING INSTRUCTIONS

1. Insert Money

NOTE: No Change Given

2. Choose RACK or TIME PLAY

**By pushing the
TIME / RACK
Button**

**3. Press the START
Button (Next to the
Dollar Bill Acceptor)
to release the balls**

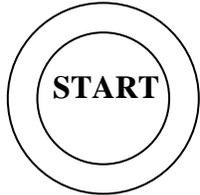

To START and STOP the SPEED POOL Timer

**Press the TIME / RACK
Button next to the Dollar
Bill Acceptor**

**Or the START Button
next to the Q-Ball Return**
